

FORTIFIED FENCING, FIT FOR FORTY YEARS

In a landscape where durability, safety, and sustainability are more important than ever, FortiPost has emerged as a game-changing solution for the agricultural fencing market.

Designed specifically to give maximum performance in the field, FortiPost offers farmers a safer and environmentally responsible fencing timber, all underpinned by a market-leading, fully traceable 40-year replacement warranty.

At the core of FortiPost's superior performance is the use of slow-grown, machine rounded Pine, chosen for its high sapwood content, which enables maximum preservative uptake during treatment. This ensures unrivalled penetration of preservative deep into the vulnerable sapwood, resulting in exceptional protection against fungal rot and decay.

FortiPost is treated here in the UK, with full control over the conditioning and pressure treatment process and by an approved Benchmark treater. Timbers are dried to 25% and below, through state of the art drying kilns. The result is absolute quality assurance; correctly conditioned timbers, treated with our unique formulation of preservative and applied using our bespoke 40-year pressure treatment cycle, make FortiPost the only trusted and responsible choice for long life fencing.

Another standout feature of FortiPost is its innovative four-way engineered point, designed specifically to establish superior ground anchoring for both straining posts and stakes. This precision-cut point allows for cleaner, easier installation while improving the post's stability in the ground — a critical factor in maintaining fence line integrity over time. Whether in soft soils or more challenging terrain, this engineered point ensures a solid foundation with anti-twist attributes that installers can trust.

As the agricultural industry continues to look for alternatives to creosote-based treatments due

▲ Forti-Post Cross Section

to health, safety and environmental concerns, FortiPost provides a safe, high-performance and cost-effective alternative that does not compromise on longevity. For fencing contractors, it offers a cleaner and safer product to handle. For landowners, it's a future-proof investment to secure any perimeter.

FortiPost's fully traceable 40-year warranty, registered directly with the manufacturer and linked to each post via unique end tag recognition, provides unmatched confidence and transparency. There is no sliding scale or expected service life; only a commitment to replace any stake that fails due to fungal rot or decay across the full span of 40 years.

Following extensive feedback, FortiPost gives farmers and landowners a timber fencing solution that will perform for generations to come, further reducing maintenance and remedial costs.

Every stake can be traced back through the manufacturing process, giving customers total reassurance in both the product and the protection that comes with it. All underpinned by the Wood Protection Association approved Benchmark accredited treater scheme.

With superior engineering, full-process quality control, verified field performance and exceptional value, FortiPost is setting a new benchmark in agricultural fencing; delivering confidence for now and generations to come.

FortiPost has been in development for some time, we have listened to critical feedback from customers and installers about what they want and need from a modern fencing product. We have set three fundamental foundations of trust into every FortiPost product we manufacture:

Fortipost is a safer alternative to other higher performing timber products:

Less health risks for contractors and installers.

Fortipost will be readily available throughout the season:

Trusted supply chains to make sure product is there when you need it the most.

Fortipost will be more cost effective than other higher performing alternatives:

Reducing the initial cost of installation for farmers without compromising performance.

All underpinned with our No Quibble, simple and traceable replacement warranty.

FortiPost launches fully at Fencex on Wednesday 15th October at Stoneleigh Park.

Stand 4 Outdoor Area, come and see the results for yourself.
