

## DeerGuard: Durable Deer Fencing

High-performing timber-fencing solution for boundary fencing.

# DeerGuard Long Life Post Technology

Supplied with no quibble warranty and saves money over 30 years

**DEERGUARD IS COMPLIANT TO USE CLASS 4 (UC4) BS8417 FOR GROUND CONTACT REQUIREMENTS AND BACKED BY WPA BENCHMARK ACCREDITATION**

M&M Timber DeerGuard provides a high-performing timber-fencing solution for boundary fencing across agricultural land, country estates and parks.

The fencing range of stakes, struts and strainers are ideal for perimeter solutions, where deer are grazing, but also to help protect land from wild deer in particular any new planting, young trees or hazel coppice.

DeerGuard is available as a Morbark peeled option with clean four-way anti-twist points and produced from specifically slow-grown. The high-performance timbers are kiln-dried to ensure moisture is below 30%. This ensures full sapwood penetration and maximum loading of preservative during the pressure treatment process.

Performance is critical in ground contact timbers, and this is exactly why DeerGuard can be treated to standards which carries 30-year warranty. No quibble and fully traceable. If the product were to fail at any point during this period, the timbers will be replaced free of charge.

- Slow-Grown Pine
- Four-way anti-twist pointed posts for ultimate stability
- Date recognition ID tag
- Square packs for easy stacking, transporting, and storing
- Fully compliant to Use Class 4 (UC4) BS8417 for ground contact requirements
- Fully traceable replacement warranty in the event of failure due to fungal rot or decay\*
- Online warranty registration system, visit: [www.mmtimber.co.uk/warranty](http://www.mmtimber.co.uk/warranty)

M&M Timber DeerGuard fencing timbers are backed by the independent WPA Benchmark accreditation.

The WPA benchmark scheme relates specifically to the durability (resistance to biological degradation) of wood treated with preservative by an industrial impregnation process. It applies specifically to a treated product such as a post. Products certified under this scheme are verified as being compliant with BS8417, the wood preservation code of practice. The Benchmark brand is recognised as a trusted stamp of quality wood preservation within the timber industry.

## HUGE SAVINGS IN REPLACEMENT MATERIALS & LABOUR COSTS OVER EXTENDED LIFETIME
